### **Stegosaurus:**

The Stegosaurus lived about 145 million years ago during the Jurassic period and is famous for its two rows of kite-shaped plates that stick out from its neck, back, and tail.

This four-legged dinosaur was about the length of a bus and weighed almost 14,000 pounds. But this enormous animal had a brain that was only slightly larger than a walnut!

### The Velociraptor:

Velociraptors are commonly called a Raptor and were walking the earth around 70 million years ago. They were one of the faster dinosaur species and could move at a speed of up to 40 miles per hour.

It measured about 2 metres long and 0.62 metres tall at the hip, bigger than the common chimpanzee.

They stood and moved on their back legs, just like humans, and had 3 claws on each leg to help them grab things, again, just like humans.

### The Tyrannosaurus Rex:

The Tyrannosaurus Rex, more commonly known as the T-Rex was stomping around the earth 65 million years ago during the Cretaceous period.

It was one of the most ferocious of predators with a massive body, sharp teeth and jaws so powerful they could crush a car.

The T-Rex was one of the largest dinosaurs to ever have lived and stood up to 4 metres in height and had 50-60 banana-sized teeth in its mouth and a brain twice the size of most other hunting dinosaurs.
